

PORTABLE SYSTEM FOR LIVE TELEVISION SIGNAL EDITING

ABSTRACT OF THE DISCLOSURE

5 A system and method for editing live television signals. This system includes: a plurality of input connectors for receiving separate input video signals, and an output connector; a mixer for generating at the output connector a real-time output video signal derived from at least one of the input video signals; a single display monitor for simultaneously displaying each of the input video signals and
10 the output video signal; and an imager coupled between the mixer and the display monitor for causing at least three images to be displayed on the display monitor in a split-screen format, the at least three images corresponding to the input video signals and the output video signal. The system is enclosed in a portable suitcase housing.
